D375A-5
With Tier 3 Engine

HORSEPOWER
Gross: 451 kW 605 HP @ 1800 rpm
Net: 391 kW 525 HP @ 1800 rpm

OPERATING WEIGHT
69560 kg 153,350 lb

Photos may include optional equipment.
**Komatsu-integrated design**

for the best value, reliability, and versatility. Hydraulics, power train, frame, and all other major components are engineered by Komatsu. You get a machine whose components are designed to work together for higher production, greater reliability, and more versatility.

**Simple hull frame**

and monocoque track frame with pivot shaft for greater reliability.

**Large blade capacities:**

18.5 m$^3$ 24.2 yd$^3$ (Semi-U dozer) and 22.0 m$^3$ 28.8 yd$^3$ (U dozer).

**Preventative maintenance**

- Centralized service station
- Enclosed hydraulic piping
- Modular power train design
- Oil pressure checking ports

**SAA6D170E-5 turbocharged after-cooled diesel engine** provides an output of 391 kW 525 HP with excellent productivity. This machine is EPA Tier 3 and EU stage 3A emissions certified.

**Hydraulic driven radiator cooling fan**

controlled automatically, reduces fuel consumption and operating noise levels.

**Automatic lockup torque converter**

saves fuel and increases speed and power transmission efficiency on long pushes.

**New track link design**

reduces maintenance cost by making turning pins easier with improved pin reuse.

The **Dual tilt dozer** increases productivity while reducing operator effort.
New hexagonal designed cab includes:
- Spacious interior
- Comfortable ride with new cab damper mounting and K-bogie undercarriage
- Excellent visibility
- High capacity air conditioning system
- PCCS (Palm Command Control System) lever
- Pressurized cab
- Adjustable left armrest
- Travel control console integrated with operator seat

Extra-low machine profile provides excellent machine balance and low center of gravity.

ECMV (Electronic Controlled Modulation Valve) controlled steering clutch/brake system facilitates smooth and shockless steering operation.

K-Bogie undercarriage system improves traction, component durability, and operator comfort.

Track shoe slip control system reduces operator fatigue.

HORSEPOWER
Gross: 451 kW 605 HP @ 1800 rpm
Net: 391 kW 525 HP @ 1800 rpm

OPERATING WEIGHT
69560 kg 153,350 lb

BLADE CAPACITY
Semi-U: 18.5 m³ 24.2 yd³
Full-U: 22.0 m³ 28.8 yd³

VHMS (Vehicle Health Monitoring System) with ORBCOMM provides efficient monitoring of machine conditions for maximum productivity.

Rippers (optional)
- Variable giant
- Multi-shank

Photo may include optional equipment.
Komatsu’s new ergonomically designed control system “PCCS” creates an operating environment with “complete operator control.”

Human-Machine Interface

**Palm Command Electronic Controlled Travel Control Joystick**

Ergonomically designed palm command travel joystick provides the operator with a relaxed posture and superb fine control without operator fatigue. Transmission gear shifting is simply carried out with thumb push buttons.

**Fully Adjustable Air Suspension Seat and Travel Control Console**

For improved rear visibility during the return cycle, the operator can adjust the seat 15° to the right. The transmission and steering controls move with the seat for best operator comfort. The operator seat is also tiltable for facilitating downhill dozing. The travel control console has adjustments fore and aft, and for height. With an independently adjustable armrest, every operator can adjust control positions to their individual preference, providing optimum operational posture for all operators.

**Air Suspension Seat**

**Left-hand Joystick**

**Blade and Ripper Control Joystick**

**Fuel Control Dial**

Engine RPM is controlled by electric signals, providing ease of operation and eliminating maintenance of linkage and joints.

**Palm Command PPC-Controlled Blade Control Joystick**

Blade control joystick uses the PPC (Proportional Pressure Control) valve and the same palm command type joystick as the travel control joystick. PPC control, combined with the highly reliable Komatsu hydraulic system, enables superb fine control (dual-tilt and pitch operation are enabled by depressing switch with thumb).

**Height Adjustable Blade Control Armrest**

Blade control armrest is height adjustable in three stages without tools, providing the operator with firm arm support and ideal armrest position.

**Position Adjustable Ripper Control Lever**

Ripper control lever is position adjustable, providing optimum operation posture for all operators during ripping facing forward or watching the ripper point.

**Outline of Electronic Control System**
Power Train Electronic Control System

Smooth and Soft Operation

The D375A-5 utilizes a new power train electronic control system. The controller registers the amount of operator control (movements of lever and operation of switches) along with machine condition signals from each sensor to accurately calculate the control of the torque converter, transmission, and steering clutches and brakes for optimized machine operation. The ease of operation and productivity of the new D375A-5 is greatly improved through these new features.

ECMV (Electronic Controlled Modulation Valve) Controlled Transmission

Controller automatically adjusts each clutch engagement depending on travel conditions such as gear speed, RPM and shifting pattern. This provides shockless, smooth clutch engagement, improved component reliability, improved component life and operator ride comfort.

ECMV Controlled Steering Clutches/Brakes

Sensors monitor machine operating conditions and electronically control steering clutches and brakes. Monitoring application parameters such as size of load during dozing, incline angle of slope, and load provides smooth and easy operation by reducing counter-steering on downhill travel, etc.

Effect of ECMV Steering Clutches/Brake Control

Preset Travel Speed Selection Function

Preset travel speed selection function is standard equipment, enabling the operator to select fore and aft travel speed among three preset patterns such as F1-R2, F2-R2, and manual shift. When F1-R2 or F2-R2 preset pattern is selected, and travel control joystick moves to forward/rearward direction, the machine travels forward/reverse with F1-R2 or F2-R2 speed automatically. This function reduces gear shifting time during repeated round-trip operations.

Auto-Downshift Function

The controller monitors engine speed, travel gear, and travel speed. When load is applied and machine travel speed is reduced, the controller automatically downshifts to optimum gear speed to provide high fuel efficiency. This function provides comfortable operation and high productivity without manual downshifting. This function can be cancelled with the cancel switch.
Komatsu’s new "ecot3" engines are designed to deliver optimum performance under the toughest of conditions, while meeting the latest environmental regulations. This engine is Tier 3 EPA, EU Stage 3A and Japan emissions certified; "ecot3" - ecology and economy combine with Komatsu technology to create a high performance engine without sacrificing power or productivity.

**Engine**

The Komatsu SAA6D170E-5 engine delivers 391 kW 525 HP at 1800 rpm. The fuel-efficient Komatsu engine, together with the heavy machine weight, make the D375A-5 a superior crawler dozer in both ripping and dozing production. The engine is EPA Tier 3 and EU stage 3A emissions certified, and features direct fuel injection, turbocharger, air-to-air aftercooler and cooled EGR system to maximize fuel efficiency. To minimize noise and vibration, the engine is mounted to the main frame with rubber cushions.

**Hydraulic Drive Radiator Cooling Fan**

Fan rotation is automatically controlled depending on coolant and hydraulic oil temperature, saving fuel and providing great productivity with a quiet operating environment.

**Automatic Torque Converter Lockup System**

For greater efficiency during long pushes, the lockup mode allows the system to automatically engage the torque converter lockup clutch. Locking up the torque converter transmits all the engine power directly to the transmission, increasing ground speed and thus achieving efficiencies equal to a direct drive. The results of this efficient use of engine power are less fuel consumption and faster cycle times.

**K-Bogie Undercarriage System**

New K-Bogie Undercarriage System combines prior advantages with new additional features.

Current features:
- Effective length of track on ground is consistent. Shoe slippage is minimized; therefore, high traction is obtained.
- The idler does not oscillate under load, providing excellent machine balance. Blade and ripper penetration force remains stable for increased productivity.

New features on K-Bogie Undercarriage System:
- K-bogies oscillate with two fulcrums, and track roller vertical travel is greatly increased. Impact loading to undercarriage components is reduced and durability of components is improved since track rollers are always in contact with track link.
- Undercarriage life is improved due to better control of track chain alignment with track rollers
- Riding comfort is improved by reducing vibration and shock when traveling over rough terrain
Large Blade
Capacities of 18.5 m$^3$ 24.2 yd$^3$ (Semi-U dozer) and 22.0 m$^3$ 28.8 yd$^3$ (U dozer) yield outstanding production. High-tensile-strength steel comprising the front and sides of the blade increase durability.

Dual Tilt Dozer
The dual tilt dozer increases productivity while reducing operator effort.
- Optimum blade cutting angle for all types of materials and grades can be selected on-the-go for increased load and production.
- Digging, hauling, and dumping are easy and smooth with less operator fatigue.
- Dozer tilt angle and tilt speed are twice that of a conventional single tilt system.

Track Shoe Slip Control System
- Eliminates the need for the operator to constantly control engine power output with the decelerator while ripping. Operator fatigue is substantially reduced.
- Maneuverability is improved because the operator is free to focus on the ripping application without having to monitor the track shoe slippage.
- Repair costs are significantly lowered and undercarriage life is prolonged with the reduction in track shoe slippage.
- The track shoe slip control system will contribute to lower fuel costs, because the engine output is automatically controlled to optimum levels for operation.

Rippers (optional)
- The variable giant ripper features a long sprocket center-to-ripper point distance, making ripping operation easy and effective while maintaining high penetration force.
- The variable giant ripper is a parallelogram single shank ripper ideal for ripping tough material. The ripping angle is variable, and the depth is adjustable in three stages by a hydraulically controlled pin puller.
- The multi-shank ripper is a hydraulically controlled parallelogram ripper with three shanks.
Operator Comfort

Operator comfort is essential for safe and productive work. The D375A-5 provides a quiet, comfortable environment where the operator can concentrate on the work at hand.

Hexagonal Pressurized Cab

- The cab's new hexagonal design and large tinted glass windows provide excellent front, side, and rear visibility.
- Air filters and a higher internal air pressure combine to prevent dust from entering the cab.

Fresh Air Intake from Rear of Engine Hood

The air conditioner air intake port is now located at the rear of the engine hood where there is minimal dust. As a result, the air inside the cab is always clean. Cleaning interval of the filter is greatly extended, and use of a new structure filter element facilitates cleaning and replacement.

Comfortable Ride with New Cab Damper Mounting and K-Bogie Undercarriage

D375A-5’s cab mount uses a new cab damper mounting which further improves viscous damper and provides excellent shock and vibration absorption capacity with its long stroke. The cab damper mounting, combined with new K-bogie undercarriage, softens shocks and vibrations, while traveling over adverse conditions, that are impossible to absorb with conventional cab mounting methods. The soft spring cab damper isolates the cab from the machine body, suppressing vibrations and providing a quiet, comfortable operating environment.
Preventative Maintenance

Preventative maintenance is the only way to ensure long service life from your equipment. That’s why Komatsu designed the D375A-5 dozer with conveniently located maintenance points to make necessary inspections and maintenance quick and easy.

Centralized Service Station
To ensure convenient maintenance, the transmission and torque converter oil filters are both arranged next to the power train oil level gauge.

Monitor with Self-Diagnostic Function
If the monitor finds abnormalities, the corresponding warning lamp blinks and a warning buzzer sounds. When abnormalities occur during operation, user code and service meter are displayed alternately. When a high importance user code is displayed, a caution lamp blinks and warning buzzer sounds to prevent serious problems from developing.

Gull-wing Engine Side Covers
Dual insulated gull-wing engine side covers facilitate engine maintenance and filter replacement. Side covers are thick one-piece structures with bolt-on latches to improve durability and repairability and facilitate easy opening.

Low Maintenance Costs

Track Link with Wedge Ring
New D375A-5 dozer track links feature reduced press-fit force and a wedge ring. Conventional track pins are retained only with a large press-fit force. This results in easier service with reduced pin damage when turning pins and bushings. This leads to improved undercarriage life and reduced maintenance cost through reduced wear, greater pin reusability, and fewer maintenance man-hours.

Highly reliable electric circuit
The electrical circuit reliability is increased by utilizing dust, vibration, and corrosion resistant “DT connectors”. The reinforced electrical wiring harnesses include a circuit breaker and are covered with a heat-resistant material to increase mechanical strength, provide longer life, and protect the system from damage.

Oil Pressure Checking Ports
Pressure checking ports for power train components are centralized to promote quick and simple diagnosis.

VHMS (Vehicle Health Monitoring System)
VHMS controller monitors the health conditions of major components and enables remote analysis of the machine and its operation. This contributes to reduced repair costs and to maintaining maximum availability as the result of proactive service. This process is fully supported by the Komatsu distributors, factory and design teams.

Flat Face O-Ring Seals
Flat face O-ring seals are used to securely seal all hydraulic hose connections and to prevent oil leakage.

Enclosed Hydraulic Piping
Hydraulic piping for the blade tilt cylinder is completely housed in the push arm protecting it from damage.

Modular Power Train Design
Power train components are sealed in a modular design that allows the components to be dismounted and mounted without oil spillage, making servicing work clean, smooth, and easy.

Maintenance-Free Disc Brakes
Wet disc brakes are adjustment-free and provide excellent service life.
D375A-5 Crawler Dozer

SPECIFICATIONS

ENGINE

Model: Komatsu SAA6D170E-5
Type: 4-cycle, water-cooled, direct injection
Aspiration: Turbocharged, air-to-air aftercooled, cooled EGR
Number of cylinders: 6
Bore x stroke: 170 mm x 170 mm
Piston displacement: 23.15 ltr
Governor: All-speed, electronic
Horsepower
SAE J1995: Gross 451 kW 605 HP
ISO 9249 / SAE J1349*: Net 391 kW
Rated rpm: 1800 rpm
Fan drive type: Hydraulic
Lubrication system
Method: Gear pump, force lubrication
Filter: Full-flow
*Net horsepower at the maximum speed of radiator cooling fan: 391 kW 525 HP
*Net horsepower of this machine is controlled to be constant regardless of the fan speed.

TORQFLOW TRANSMISSION

Komatsu TORQFLOW transmission consists of a water-cooled, 3-element, 1-stage, 1-phase, torque converter with lockup clutch and a planetary gear, multiple-disc clutch transmission which is hydraulically actuated and force-lubricated for optimum heat dissipation. Gearshift lock lever and neutral safety switch prevent accidental starts.

STEERING SYSTEM

PCCS lever, joystick controlled, wet multiple-disc steering clutches are spring-loaded and hydraulically released. Wet multiple-disc, pedal/lever controlled steering brakes are spring-actuated hydraulically released and require no adjustment. Steering clutches and brakes are interconnected for easy, responsive steering.

Minimum turning radius: 4.2 m 139"

UNDERCARRIAGE

Suspension: Oscillating equalizer bar and pivot shaft
Track roller frame: Cylindrical, high-tensile-strength steel construction
Rollers and idlers: Lubricated track rollers
K-Bogie undercarriage: Lubricated track rollers are resiliently mounted to the track frame with a bogie suspension system whose oscillating motion is cushioned by rubber pads.

Extreme service track shoes: Lubricated tracks. Unique seals prevent entry of foreign abrasives into pin to bushing clearances to provide extended service life. Track tension is easily adjusted with grease gun.

Number of shoes (each side): 41
Grouser height:
Single grousers: 93 mm 3.7"
Shoe width (standard): 610 mm 24"
Ground contact area: 48560 cm² 7,527 in²
Ground pressure: 140 kPa 1.43 kg/cm² 20.3 psi
Number of track rollers: 8
Number of carrier rollers: 2

*Ground pressure shows tractor with cab, ROPS, giant ripper, standard equipment and applicable blade.
STANDARD EQUIPMENT

- Air conditioner with heater and defroster
- Alternator, 90 ampere/24 V
- Back-up alarm
- Batteries, 2 x 12 V, 200 Ah
- Blower fan
- Car stereo
- Decelerator pedal
- Dry-type air cleaner with dust evacuator and dust indicator
- Dual tilt dozer
- Eight-roller track frames
- Final drive case wear guard
- Hydraulics for ripper
- Hinged front mask
- Hinged underguard with front pull hook
- Hydraulic track adjusters
- Light for ripper point
- Lockup torque converter
- Mirror, rear view
- Muffler with rain cap
- Palm lever steering control
- Perforated side covers
- Radiator reserve tank
- ROPS
- Segmented sprockets
- Seat, air suspension, fabric
- Seat belt, 78 mm 3"
- Shoes, 810 mm 24" extreme service, single-grouser
- Starting motors, 2 x 7.5 kW/24 V
- Sun visor
- Suspension seat
- TORQFLOW transmission
- Track roller guards
- Track shoe slip control system
- VHMS or VHMS with ORBCOMM
- Vandalism protection kit
- Warning horn
- Wet steering clutches

OPTIONAL EQUIPMENT

- Counterweight
- Cushion push block
- Hitch
- Lighting system (including four front and two rear lights)
- Panel cover
- Pusher plate
- Shoes:
  - 710 mm 28"
  - 810 mm 32"
- Spill guard for Semi-U dozer
- Spill guard for U dozer
- Strengthened Semi-U blade
- Strengthened U blade

ROPS*:
Weight.................. 700 kg 1,540 lb
Roof dimensions:
Width .................. 1980 mm 6'6"
Height from compartment floor ........ 1872 mm 6'2"
*Meets ISO 3471 and SAE J1040 APR88, ROPS standards.

Steel cab*:
Weight .................. 570 kg 1,260 lb
Dimensions:
Length .................. 1875 mm 6'2"
Width .................. 1740 mm 5'9"
Height from compartment, floor to ceiling ........ 1630 mm 5'4"
*Meets ISO 3449 FOPS standard.

Multi-shank ripper:
Hydraulically controlled parallelogram ripper with three shanks. Ripping angle available, stepless adjustable.
Weight (including hydraulic control unit) ........ 6720 kg 14,810 lb
Beam length .............. 2854 mm 9'4"
Maximum lift above ground .... 1140 mm 3'9"
Maximum digging depth ...... 1020 mm 3'4"

Variable giant ripper:
Variable, parallelogram single-shank ripper ideal for ripping up tough material. Ripping angle is variable. Ripping depth is adjustable in three stages by a hydraulically controlled pin puller.
Weight (including hydraulic control unit) ........... 5470 kg 12,060 lb
Beam length................ 1367 mm 4'6"
Maximum lift above ground .......... 1470 mm 4'10"
Maximum digging depth .......... 1370 mm 4'6"
